Orbit Digital — Synthetic Supplier RFP Response

Fictional document created for testing the Agentic RFP Evaluation and Supplier Ranking mini-project. No real supplier or confidential information is used.

1. Executive Summary and Understanding

Orbit Digital has strong supplier experience and reference evidence and offers a commercially moderate proposal. Its main weakness is a high-level integration plan with limited technical detail.

Supplier Profile

Strong experience and references; vague integration plan; medium pricing.

2. Proposed Solution and Implementation Approach

Orbit proposes a configurable platform with API integration, dashboards, workflow automation, monitoring, and managed deployment. The architecture is described at a conceptual level and does not specify detailed legacy integration patterns.

3. Timeline, Team Structure and Milestones

10-week target: 2 weeks discovery, 3 weeks configuration, 2 weeks integration, 2 weeks testing, 1 week go-live. Team: program manager, technical lead, 3 engineers, QA analyst.

Orbit Digital — Commercial and Risk Details

4. Price Table and Assumptions

Base implementation: $315,000. Year-one support: $78,000. Optional data migration: $35,000. Assumes two major integrations and standard data formats.

5. Security, Compliance and Risk Controls

Includes encryption, RBAC, SSO, logging, backups, vulnerability scanning, and incident management. Compliance discussion is present but certification and audit evidence are not included.

Risk and Missing Information

Integration architecture is not detailed enough to validate complex dependencies. Compliance evidence is less complete than the technical and reference evidence.

6. Support Model, Experience and References

24x7 critical support with two-hour acknowledgement, quarterly service reviews, and named escalation contacts. Four comparable projects are described and three customer references are listed.

Evaluation note

This proposal intentionally contains a mix of strong evidence and omissions so an AI evaluator can demonstrate evidence-grounded scoring, warnings, peer benchmarking, and explainability.

Orbit Digital — Appendix: Evaluation Evidence

Key evidence summary

Area	Proposal evidence
Technical	Orbit proposes a configurable platform with API integration, dashboards, workflow automation, monitoring, and managed deployment. The architecture is described at a conceptual level and does not specify detailed legacy integration patterns.
Implementation	10-week target: 2 weeks discovery, 3 weeks configuration, 2 weeks integration, 2 weeks testing, 1 week go-live. Team: program manager, technical lead, 3 engineers, QA analyst.
Commercial	Base implementation: $315,000. Year-one support: $78,000. Optional data migration: $35,000. Assumes two major integrations and standard data formats.
Security	Includes encryption, RBAC, SSO, logging, backups, vulnerability scanning, and incident management. Compliance discussion is present but certification and audit evidence are not included.
Support/Experience	24x7 critical support with two-hour acknowledgement, quarterly service reviews, and named escalation contacts. Four comparable projects are described and three customer references are listed.
